

Location/Worksite	MI, Ada
Type of employment	Full Time : F
Shift	1
Job description	<p>This position is responsible for leading and supporting preventative microbiology programs at Access Business Group (ABG). These efforts are aimed at assuring that the products made at ABG are free from microbial contamination. Specific duties include coordinating and performing the microbiological sampling and testing of plant environments, supporting ABG's cleaning and sanitizing validation programs, identifying and implementing corrective actions and continuous improvement opportunities, and training Manufacturing and QA staff on GMPs and plant hygiene. This position requires specific knowledge of microbiological techniques and procedures, with preference given to those with knowledge and experience with the microbiological aspects of cleaning and sanitizing processes.</p>
Minimum Education/Experience Requirements	<p>The desired candidate would have a Bachelors degree in Microbiology with 3 - 5 years appropriate scientific exposures. This person should have knowledge and expertise in microbiological principles with experience in cleaning and sanitizing processes. Working knowledge of cGMP, with experience in OTC and/or pharmaceutical drug operations strongly preferred.</p>
